ABOUT ME

Cybersecurity-focused Computer Science student (BS, University of Central Punjab) who built Mini-SOC, a full security-monitoring and incident-detection platform, alongside a context-aware phishing detector, an entropy-based password-strength analyzer, and an AES-256 encryption tool. Completed a virtual cybersecurity internship at DecodeLabs, applying security-analysis techniques and defensive security concepts to real project work. Seeking an entry-level SOC Analyst or Cybersecurity Analyst role to build on this experience in real-world security operations.

WORK EXPERIENCE

Cybersecurity Intern — DecodeLabs, Remote

07/2026 – 08/2026

- Completed a fully remote, one-month cybersecurity internship covering hands-on security analysis tasks and defensive security concepts
- Developed and documented security-focused projects as internship deliverables
- Earned a certificate of completion and a letter of recommendation citing strong technical problem-solving and collaboration

Business or sector: Information technology / cybersecurity

Digital Marketing & Design — Multiple organizations, Pakistan

2021 – 2025

- Delivered client-facing digital marketing, graphics design, and social media management work across several organizations, including e-commerce training delivery
- Built client communication, project management, and attention-to-detail skills, later applied to structured, deadline-driven cybersecurity project work

Business or sector: E-Commerce, Marketing & digital media

EDUCATION AND TRAINING

BS Computer Science — University of Central Punjab (UCP), Pakistan

Expected 2027

Relevant coursework: Cybersecurity, Computer Networks, Operating Systems, Database Systems, Data Structures & Algorithms, Artificial Intelligence

LANGUAGE SKILLS

Mother tongue(s): Urdu

Other language(s): English

DIGITAL SKILLS

Programming: Python, C++, Java (Basic), SQL, SQLite, HTML/CSS/JavaScript (Basic)

Security Tools: Wireshark, PyCryptodome, Git & GitHub, Pytest, VS Code, Flask

Operating Systems: Linux, Windows

PROJECTS

Mini-SOC — Security Monitoring & Incident Detection Platform (Python, Flask, SQLite)

github.com/abdulrehman-at3/mini-soc

- Built a full SOC pipeline covering log collection, normalization, detection, alerting, incident management, and reporting — the complete Detection → Alert → Investigation → Response → Reporting loop
- Implemented rule-based detection (brute-force, port scanning, privilege escalation, suspicious IPs, unusual login times) plus a statistical anomaly detector for distributed, low-and-slow attacks
- Built a Flask analyst dashboard with authentication, incident tracking, investigation tools, and Markdown/HTML/PDF reporting; integrated offline and live threat intelligence; validated with 43 tests

PhishGuard — Context-Aware Phishing Email Detector (Python, Flask)

github.com/abdulrehman-at3/PhishGuard

- Redesigned from naive keyword-matching into an evidence-based detector: classifies message type, then scores 0–100 on hard evidence (spoofed senders, lookalike links, credential requests)
- Hardened with CSRF protection, rate limiting, and sanitized input (OWASP-inspired); validated with 35 automated tests

CyberShield — Password Strength & Entropy Analyzer (Python)

github.com/abdulrehman-at3/CyberSecurity-Password-Strength-Checker Scores passwords on composition, entropy, and brute-force search space against dictionary lists; includes a secure password generator and exportable reports

Encrypto — Encryption/Decryption CLI (Python, PyCryptodome)

[abdulrehman-at3/Encrypto-CyberSecurity-Encryption-and-decryption-project](https://github.com/abdulrehman-at3/Encrypto-CyberSecurity-Encryption-and-decryption-project)

- CLI over Caesar, Vigenère, and password-derived AES-256-GCM ciphers with PBKDF2 key derivation; tampered tokens are rejected outright rather than silently decrypted

CERTIFICATES

- Introduction to Cybersecurity Awareness — HP LIFE, HP Foundation (2026)
- Cyber Security Virtual Internship Certificate — DecodeLabs (2026), with letter of recommendation
- Responsive Web Development (HTML5, CSS3, JavaScript, Bootstrap) — EDUCBA (2021)
